

Always Green, Inc. guarantees to our customers that we use highest quality materials available for the hydro seeding process. Certified turf grass seed is applied in a mixture of water, high phosphorus fertilizer, hydro mulch, tackifier and other additives. The hydro seed slurry is applied evenly to your prepared soil using the most advanced hydro seeding equipment at the appropriate rates. If the seed does not germinate evenly within 30 days of application (weather permitting) due to product failure or workmanship, those portions of the lawn that have not germinated will be re-seeded one time at no charge under the following conditions: **Potential problems must be brought to our attention within 30 days of application. Always Green, Inc is not responsible for weed competition or eradication. Not responsible for acts of nature, vandalism, diseases or anything else beyond our control. This includes spotty germination as a result of soil compaction, torrential rains, drought or any other weather related conditions. This guarantee is not valid for late season dormant seeding when soil temperatures drop below 50°F.** *A care guide will be provided;* it is the responsibility of the undersigned to be sure this guide is followed. For best results the top 1-2 inches of soil must be loose so the hydroseed will root evenly. This guarantee does not apply to seed supplied by anyone other than Always Green, Inc.
